# Unit 4 Exam Version B Research Summary

Please answer the following questions in the space provided. Only write on the lines. Adapted from: Stephens, R., Atkins, J., & Kingston, A. (2009). Swearing as a response to pain. *Neuroreport*, 20, 1056-60.

Oh \$\*%# that hurts! Do you swear when you stub your toe? Turns out this bad language could be good for you! Psychologists have found empirical evidence that swearing may increase pain tolerance. Sixty-seven undergraduate participants came into the laboratory and were asked to immerse their hand into a bucket of icy water. Researchers explained the whole task and told the participants they could pull their hand out of the water at any time. Icy water is painful but won't cause any actual damage in a few minutes. The researchers randomly assigned half of the participants to read a list of swear words while their hand was in the water and instructed the other half to recite the alphabet from memory. They measured how many seconds each participant kept his, her, or their hand in the icy water. Researchers compared the results from people who cursed to people who did not curse. The participants who recited curse words kept their hand in the icy water longer (M = 57.2, SD = 1.31) than those who recited the alphabet (M = 22.8, SD = 1.23). Researchers concluded that reading curse words significantly increased pain tolerance, t(66) = 2.218, p = 0.03.

#### **Predictor Variable**

Thinking about the Predictor / Independent Variable: <u>Swearing Condition</u>

Partial operational definition: Participants were instructed to swear or to recite the alphabet

3 pts	<ol> <li>The Predictor / Independent Variable is (fill in Categorical</li> </ol>	the box)  Continuous
3 pts	<ul><li>2. How was the Predictor / Independent Variab</li><li>Observation</li><li>Self-Report</li></ul>	ole measured? (fill in the box)  Physiological  It was manipulated
5 pts	3. Is this a causal or associative claim? (fill in the ☐ <b>Associative</b>	e box)  □ Causal
5 pts	<ul><li>4. This variable is (fill in the box)</li><li>□ between groups</li></ul>	□ within group
	Use this information only for the next two questions: Another researcher wants to extend this finding address the same research question. This resear say whatever they want while their hand is in the whether the participants said swear words or no	rcher instructs all of the participants to e water. The researcher codes
3 pts	5. How was this new Predictor / Independent Va ☐ Observation ☐ Self-Report	ariable measured? (fill in the box)    Physiological   It was manipulated
5 pts	6. Is this new claim a causal or associative claim  Associative	n? (fill in the box)   Causal

### Outcome Variable

Thinking about the outcome / dependent variable: Pain tolerance

10 pts	7. How did the researchers operationally defir variable? Describe it using your own words. B and indicate how the codes will be interprete	e sure to include the levels or values
3 pts	8. The outcome / dependent variable is (fill in table    Categorical	he box)  Continuous
3 pts	9. How was the outcome / dependent variable  Observation Self-Report	e measured? (fill in the box)  Physiological  It was manipulated
10 pt <mark>s</mark>	10. Evaluate the <b>construct validity</b> of the outco ProTips: Give an overall evaluation. Think abou the method-match to inform your decision. Use discuss this one variable.	t the face validity, the procedure, and
		Page 3 of 8

# **Evaluate Internal Validity and Research Design**

10 pts	11. For this research summary, there is <b>not a maturation effect</b> because
10 pts	12. For this research summary, "reading" is a confound because
-	
-	
	Sampling
	Samping
5 pts	13. This is a sample of human beings.
	□ probability □ non-probability
	$P_{\text{age }} A \text{ of } Q$

# Summarize the findings

5 pts	<ul> <li>14. How did the researchers summarize th</li> <li>☐ indicate strength and direction of the c</li> <li>☐ compare group frequency</li> <li>☐ compare group means</li> </ul>		
5 pts	<ul><li>15. The error bars overlap. Therefore between the variables? (fill in the box)</li><li>□ do; is</li><li>□ do; is not</li></ul>	e, there likely a real relationship  do not; is do not; is not	
5 pts	16. The p value is Therefore, there between the variables? (fill in the box)  ☐ greater than 0.05; is ☐ greater than 0.05; is not ☐ less than 0.05; is ☐ less than 0.05; is not	a statistically significant relationship  □ greater than 0.5; is □ greater than 0.5; is not □ less than 0.5; is □ less than 0.5; is not	
	Evaluate Ext	ernal Validity	
10 pts	17. For this research, evaluate one aspect of <b>external validity</b> . You may include evidence for either a strength or a weakness. (e.g., is this authentic? does this generalize to other situations? does this generalize to other individuals?)		

	Another researcher attempted to replicate this study in a different culture. They carefully replicated every step of the procedure. They did not find the same results. Participants in this new study demonstrated the same amount of pain tolerance regardless of what they were asked to say. In this different culture, tolerating pain is highly socially valued.		
5 pts	18. This is a failure to  ☐ generalize ☐ replicate		
5 pts	19. This new finding brings into doubt the  internal validity  external validity		
5 pts	20. This new finding  □ can be explained in a way that coexists with the original finding.  □ indicates that one of the findings is likely to be invalid.		
Multiple Choice. Select the <u>single best answer</u> . Indicate your choice by filling in the box to the left of your selection. Do not put stray marks in the other boxes. If you need to change your answer and are unable to erase fully, clearly indicate your final choice (e.g., draw an arrow or circle it). 2.5 points each.			
2	1. Random assignment impacts validity. Random sampling impacts validity        internal; external		
2	2. A researcher is using deception to ensure that participants respond naturally to a stimuli. They are concerned that a participant may share critical information about a study's purpose learned during a debriefing with other potential participants, and that this disclosure could bias their responding. To avoid this potential bias, could the researcher decide not to include a debriefing?    Yes   No		
2	23.To examine interactions in a public park, a researcher observes people as they spend time at parks in a local town. Should this researcher obtain informed consent?  □ Yes □ No
